## Debt Sustainability Condition ±Mathematical Version

Thefamous debt sustainability contiden is often writtermathematically as follows:

SIMPLE ANALYTICS:
Public Debtto-GDP ratio will rise if:

Debt sustainabilityequires:

$$\dot{z} \frac{n_{\check{s}}}{|\dot{s} \cdot \dot{s}|} p L \dot{U}$$

If debtmonetization is pursued;  $^*_{\,_{\rm C}}$  P r, it will help reduce the debt burderhowever, debt monetization may result in higherflation. If we rule out debt monetization; ( c L r), then debt sustainability requires

$$F \mid \frac{s_{\check{s}} F \in_{\check{s}}}{\mid_{\check{s} \cdot \check{s}}} p \mid L : \tilde{s} F \bullet_{\check{s}}; \mid \frac{n_{\check{s}? \, \acute{U}}}{\mid_{\check{s}? \, \acute{U} \cdot \check{s}? \, \acute{U}}} p$$

## DERIVATION

ReferenceMacroeconomic (2nd Edition) by R. Glenn Hubbard and Anthony Patrick O'Brien (Publisher: Pearson)

Standard budget deficit is given by:

To capture the role of seignora@ssentially represents a transfer of wealth from indalisdu holding money to the governmently extend the above equation to include change in monetary base:

Note that the change in gormenent debt is given by:

Divide both sides by nominal GDAnd rearrange to get

$$\frac{\mathsf{n}_{\check{\mathsf{s}}}}{|_{\check{\mathsf{s}}\cdot\check{\mathsf{s}}}}\mathsf{L}: \check{\mathsf{U}}\mathsf{E} \bullet_{\check{\mathsf{s}}}; \frac{\mathsf{n}_{\check{\mathsf{s}}?\check{\mathsf{U}}}}{|_{\check{\mathsf{s}}\cdot\check{\mathsf{s}}}}\mathsf{E} \frac{\mathsf{s}_{\check{\mathsf{s}}}}{|_{\check{\mathsf{s}}\cdot\check{\mathsf{s}}}}\mathsf{F} \frac{\in_{\check{\mathsf{s}}}}{|_{\check{\mathsf{s}}\cdot\check{\mathsf{s}}}}\mathsf{F} \frac{\mathsf{i}_{\check{\mathsf{s}}}\mathsf{i}}{|_{\check{\mathsf{s}}\cdot\check{\mathsf{s}}}}\mathsf{F}$$

Modify perviousequation a follows (multiply and divide the first term on the rightand side by  $|\hat{s};\hat{u}\cdot\hat{s};\hat{u}\rangle$ :

$$\frac{\mathsf{n}_{\check{\mathtt{s}}}}{\mid_{\check{\mathtt{s}}\cdot\check{\mathtt{s}}}}\,\mathsf{L}\,:\!\check{\mathsf{U}}\mathsf{E}\,\bullet_{\check{\mathtt{s}}};\,|\frac{\mid_{\check{\mathtt{s}}?\,\check{\mathsf{U}}\cdot\check{\mathtt{s}}?\,\check{\mathsf{U}}}}{\mid_{\check{\mathtt{s}}\cdot\check{\mathtt{s}}}}\mathsf{p}|\frac{\mathsf{n}_{\check{\mathtt{s}}?\,\check{\mathsf{U}}}}{\mid_{\check{\mathtt{s}}?\,\check{\mathsf{U}}}}\mathsf{p}\,\mathsf{E}\frac{\mathsf{s}_{\check{\mathtt{s}}}}{\mid_{\check{\mathtt{s}}\cdot\check{\mathtt{s}}}}\,\mathsf{F}\frac{\notin_{\check{\mathtt{s}}}}{\mid_{\check{\mathtt{s}}\cdot\check{\mathtt{s}}}}\,\mathsf{F}\frac{\mathsf{t}_{\check{\mathtt{s}}}}{\mid_{\check{\mathtt{s}}\cdot\check{\mathtt{s}}}}$$

Note the following condition,

$$I = \frac{|\overset{\bullet}{s} \cdot \overset{\bullet}{s}}{|\overset{\bullet}{s?} \cdot \overset{\bullet}{U} \cdot \overset{\bullet}{s?} \cdot \overset{\bullet}{U}} L : \acute{U} = \mathring{E}_{\overset{\bullet}{s}}; : \acute{U} = \overset{\bullet}{s};$$

$$I \frac{\mid_{\S \cdot \cdot \check{S}}}{\mid_{\S ? \acute{U} \cdot \cdot \check{S}? \acute{U}}} p L : \acute{U} E \, \hat{E}_{\check{S}}; : \acute{U} E \bullet_{\check{S}}; \, N \, \acute{U} E \, \hat{E}_{\check{S}} \, E \bullet_{\check{S}}$$

Using the approximation

$$I \frac{|_{\check{s} \cdot \check{s}}}{|_{\check{s}? \dot{U} \cdot \check{s}? \dot{U}}} p \, N \, \dot{U} E \, \hat{E}_{\check{s}} \, E \bullet_{\check{s}}$$

We get:

$$\frac{n_{\check{s}}}{\mid_{\check{s}\cdot\check{s}}} L \stackrel{\dot{\bigcup}E \bullet_{\check{s}}}{\mid_{\check{s}\cdot\check{s}}} p | \frac{n_{\check{s}?\,\dot{U}}}{\mid_{\check{s}?\,\dot{U}\cdot\check{s}?\,\dot{U}}} p E \frac{s_{\check{s}}}{\mid_{\check{s}\cdot\check{s}}} F \frac{\in_{\check{s}}}{\mid_{\check{s}\cdot\check{s}}} F \frac{\dot{\dot{z}}t_{\check{s}}}{\mid_{\check{s}\cdot\check{s}}}$$

Another usefulpproximation:

Sα

$$\frac{n_{\check{s}}}{\mid_{\check{s}\cdot\check{s}}}\,L: \check{\mathsf{U}}\,\mathsf{E}\,\,\bullet_{\check{s}}\,\mathsf{F}\,\,\hat{\mathsf{E}}_{\check{s}}\,\mathsf{F}\,\,\bullet_{\check{s}}; \\ \frac{n_{\check{s}?\,\check{\mathsf{U}}}}{\mid_{\check{s}?\,\check{\mathsf{U}}\cdot\check{s}?\,\check{\mathsf{U}}}}\mathsf{p}\,\mathsf{E}\frac{s_{\check{s}}}{\mid_{\check{s}\cdot\check{s}}}\,\mathsf{F}\frac{\notin_{\check{s}}}{\mid_{\check{s}\cdot\check{s}}}\,\mathsf{F}\frac{\dot{\mathsf{c}}t_{\check{s}}}{\mid_{\check{s}\cdot\check{s}}}$$

Rearrange terms to get:
